PREFACE

Target's '**MHT-CET Chemistry: Previous Solved Papers (PSP)**' is a compilation of past 26 years' (1999-2024) questions asked in the MHT-CET examinations conducted by State Common Entrance Test Cell, Maharashtra State. This book is curated as per the **latest MHT-CET syllabus**.

The book features chapter-wise categorization of questions, with each chapter following a topic-wise flow. All questions related to a topic are arranged year-wise, ending with the most recent year. A special topic **Concept fusion** is drafted at the end of the MCQ section to cover multifarious questions. Answers for all questions from 1999 to 2024 are provided, with solutions from 1999 to 2021 accessible via QR codes and 2022 to 2024 solutions in the book. The solutions will serve as valuable learning tools in understanding the concepts.

Selection of **unique MCQs** is prioritized while making this book to prevent the recurrence of identical questions. This will enable students to save time spent on repetitive questions.

We have infused several **Smart Keys** such as **Caution, Thinking Hatke and Shortcuts**. These Important Study Techniques are created to help students with key objectives such as time management, easy memorization, revision and non-conventional yet simple methods for MCQ solving. To ensure adequate revision, each chapter begins with a **Quick Review**, followed by all the key **Formulae** wherever applicable.

A statistical analysis of the number of questions asked per chapter in each shift of MHT-CET 2024 examination is offered in tabular form. This analysis would help students understand the weightage allotted to each chapter. A graphical representation of analysis of all the papers (16 papers of PCM group & 14 papers of PCB group) is also included at the start of the book to elaborate on the breakdown of the difficulty level of questions asked in the examination. Studying these representations should undoubtedly aid students in planning their study strategy for the examination. *There is a possibility that the weightage to a chapter and the level of difficulty of the question paper in the future examination may vary.*

This book would provide students with confidence regarding their exam preparedness. We are confident that this book will comprehensively cater to the needs of students and effectively assist them to achieve their goal.

Law of multiple proportions is applicable when two or more elements combine in more than one form.

1. (A) 2. (A) 3. (C)

4. (A) 5. (B) 6. (D)

[Note: Detailed solutions for Q.1 to Q.6 (wherever applicable) can be accessed via QR code at the end of the chapter.]

7. (B)

Molecular mass of O_2 is 32 u.
 Mass of 1 molecule of O_2
 $= 32 \times 1.6606 \times 10^{-24} \text{ g} = 53.13 \times 10^{-24} \text{ g}$

8. (B)

Atomic mass is the mass of an atom of the element.

Mass of 1 atom of the element = 10 u
 Now, 1 u = $1.66056 \times 10^{-24} \text{ g}$
 Therefore, 10 u = $1.66056 \times 10^{-23} \text{ g}$

9. (D)

The percentage by mass of oxygen in H_2O
 $= \frac{16}{18} \times 100 = 88.9\%$

Thinking Hatke - Q.9

Water has only two elements due to which the remaining percentage by mass would be for oxygen. So, the percentage by mass of oxygen
 $= 100 - 11.1 = 88.9\%$.

10. (C)

Atomic mass unit (1 amu):

$$\begin{aligned} &= \frac{1}{12} \text{ th mass of one atom of } ^{12}\text{C} \\ &= \frac{1}{12} \times \text{mass of one } ^{12}\text{C} \\ &= \frac{1}{12} \times 1.992648 \times 10^{-23} \text{ g} \\ &= 1.66056 \times 10^{-24} \text{ g} \end{aligned}$$

11. (D)

Average atomic mass

$$\begin{aligned} &\frac{\text{atomic mass of } ^x\text{B} \times \text{percentage} \\ &+ \text{atomic mass of } ^{11}\text{B} \times \text{percentage}}{100} \\ &= \frac{20 \times x + 11 \times 80}{100} = 10.81 \end{aligned}$$

$$20x + 880 = 10.81 \times 100$$

$$x = 10.05 \text{ u}$$

\therefore Molar mass of isotope = 10.05 u

12. (B)

13. (A)

Nitrogen has two naturally occurring isotopes, namely, ^{14}N and ^{15}N .

14. (D)

Average atomic mass

$$\begin{aligned} &\frac{\text{atomic mass of } ^{35}\text{Cl} \times \text{percentage} \\ &+ \text{atomic mass of } ^{37}\text{Cl} \times \text{percentage}}{100} \end{aligned}$$

Let the % abundance of ^{35}Cl isotope = x .

% abundance of ^{37}Cl isotope = $100 - x$.

Average atomic mass = 35.5

From formula, average atomic mass

$$= \frac{35 \times x + 37 \times (100 - x)}{100} = 35.5$$

$$\therefore 35x + 3700 - 37x = 35.5 \times 100$$

$$\therefore -2x = -3700 + 3550$$

$$\therefore -2x = -150$$

$$\therefore x = 75\% \text{ and } (100 - x) = 25\%$$

Ratio of relative abundance

$$= \frac{\% \text{ abundance of } ^{35}\text{Cl}}{\% \text{ abundance of } ^{37}\text{Cl}} = \frac{75}{25} = 3:1$$
